

The ideal solution
for custom motion control projects on a
tight budget and even tighter timeframe.

Reduce cost and confusion by choosing a servo control system that includes all components in a single package. The I² Motor + controller is ready to run straight out of the box, and capable of proving engineering concepts and designs faster with more confidence.

Buy a servo control system right the first time! All the essential elements of other complex servo systems are available in a simple turn-key, all in one servo unit.

Highlights

- Out of the box and running in 5 minutes
- Complex speed and position profiles programmed in minutes
- No programming knowledge or system integration experience necessary
- Reduce development time by up to 50%

Designed to Support:

- Positioning theatrical drapery systems and screens
- Positioning scenery and animated props
- Animatronics
- Robotics
- Positioning suspended loads
- Cable management
- Special effects
- Pumping and fluid management

Programmable inputs and outputs: analog and digital.

Available in 3 sizes, continuous power ranges up to 1 HP.

Fully integrated system in a compact package: BLDC motor, controller, drive, I/O, power supply, feedback devices.

Runs on any line power source. 90VAC to 240VAC, 50-60 HZ, 100VDC to 350VDC

Programmed with your PC connected through USB port using I² Wizard software package
